Ladies' Dispensatory-Carey Balaban 2002-12-13 Leonard Sowerby's self-healing manual for women, The Ladies' Dispensatory, emerged in England in 1652 amidst an abundance of medical self-help books for the lay citizen. Written for both the common patient and the amateur health provider, these manuals of home remedies provided their readers with a variety of potential solutions to common ailments or disease. Sowerby's Dispensatory was written primarily for curing women's health problems, and in that regard, focuses heavily on gynecologic problems (the Dispensatory includes numerous preparations for inducing abortion), breast complaints, personal hygiene and cosmetic applications. Balaban, Erlen and Siderits have resurrected Sowerby's original manuscript and have provided both historical and medical explanation of its uses and usefulness. From a common garlic remedy to 'fortify the brain' to 'a hog's heel, burned to powder' for easing colic, The Ladies' Dispensatory is a delightfully unique look at health and hygiene in the seventeenth century. Also inlcludes nine maps.

Elsevier's Dictionary of Medicine and Biology-G. Konstantinidis 2005-08-18 Dictionaries are didactic books used as consultation instruments for self-teaching. They are composed by an ordered set of linguistic units which reflects a double structure, the macrostructure which correspond to the word list and the microstructure that refers to the contents of each lemma. The great value of dictionaries nests in the fact that they establish a standard nomenclature and prevent in that way the appearance of new useless synonyms. This dictionary contains a total of about 27.500 main English entries, and over of 130.000 translations that should normally sufficiently cover all fields of life sciences. The basic criteria used to accept a word a part of the dictionary during the development period in order of importance were usage, up-to-dateness, specificity, simplicity and conceptual relationships. The dictionary meets the standards of higher education and covers all main fields of life sciences by setting its primary focus on the vastly developing fields of cell biology, biochemistry, molecular biology, immunology, developmental biology, microbiology, genetics and also the fields of human anatomy, histology, pathology, physiology, zoology and botany. The fields of ecology, paleontology, systematics, evolution, biostatistics, plant physiology, plant anatomy, plant histology, biometry and lab techniques have been sufficiently covered but in a more general manner. The latest Latin international anatomical terminology "Terminologia Anatomica" or "TA" has been fully incorporated and all anatomical entries have been given their international Latin TA synonym. This dictionary will be a valuable and helpful tool for all scientists, teachers, students and generally all those that work within the fields of life sciences.
