Wikis in the College Classroom-James E. Coyle 2007

Wikis are Web-based online software programs that allow any user to add, edit, or delete content on a Wiki web page. Because of their relative simplicity and their interactive nature, Wikis are potentially effective tools for online collaborative group work, a type of activity frequently used in online distance education. This study examined online Wiki collaboration compared to more conventional face-to-face group collaboration in higher education. The study participants were juniors and seniors taking a senior-level
broadcast communications course. They were divided into two groups, and each group collaborated on writing reports using both conventional face-to-face collaboration methods and collaboration using the Wiki function in Moodle course management software. Following completion of the reports, professional subject matter experts rated the quality of the reports according to specified content and format criteria. The study’s research questions addressed (1) benefits and obstacles experienced in face-to-face collaboration; (2) benefits and obstacles experienced in Wiki-based group collaboration; (3) whether there was a difference between Wiki group collaboration and face-to-face group collaboration in terms of the quality of the final product; and (4) whether there was a difference in students' experiences of learning and sense of community after Wiki-based collaboration and face-to-face collaboration assignments. Results indicated there was no difference in the quality of reports related to the method of collaboration, suggesting that Wikis are an effective collaboration method; face-to-face collaboration is more efficient in terms of communication among group members and is sometimes preferred because it is familiar. Wiki collaboration allowed students to work at their own pace and to easily see the work of other group members. Students adapted Wiki capabilities to their previous methods of group work, and there was not a significant difference in students' experiences of learning and community between the two methods. Even though the Wiki software provided the capability, participants did not edit one another's Wiki work unless they had volunteered and were designated by the group to be an editor. Unless they were an editor, individual participants did not feel it was appropriate to change their peers' work.

Learning Management System Technologies and Software Solutions for Online Teaching: Tools and
A Benchmark Data Set and Comparative Study for Protein Structural Alignment Tools - Dipti Mittal

2008 Protein structural alignment is important for studying similarities between proteins. Various protein structural alignment tools have been developed for this task. These alignment tools have different characteristics and strategies on which they are based. In order to find out which structural alignment tool is the best for the application in hand and to develop better tools it is very important to classify the tools into groups based on these strategies and characteristics.

In this research we have studied several protein structural alignment tools and categorized them based on several properties. This provides a basis and background work for the development of future structural alignment tools. Typically the developers of a given structural alignment program test the program on a few pairs of proteins and comment on its comparison with other previously developed tools. Although there are a large number of alignment tools available, the tools have never been subjected to a comprehensive and critical comparative analysis on the basis of a common data set or test bench. The absence of such a common data set is the major reason for the lack of this analysis. In this research, we propose a benchmark data set to test any protein structural alignment program. This data set is composed of 221 protein pairs and is divided into 11 categories. We have tested all the online available structural alignment tools on this data set and analyzed their performance. On the basis of the alignment results
we have computed overall rankings of these alignment tools using three different rating methods.

**Virtual Teams That Work**
Cristina B. Gibson 2003-03-21

Virtual Teams That Work offers a much-needed, comprehensive guidebook for business leaders and managers who want to create the organizational conditions that will help virtual teams thrive. Each chapter in this important book focuses on best practices and includes case studies and illustrative examples from a wide variety of companies, including British Petroleum, Lucent Technologies, Ramtech, SoftCo, and Whirlpool Corporation. These real-life examples demonstrate how the principles identified in the book play out within virtual teams. Virtual Teams That Work shows how organizations can put in place the structure to help team members who speak different languages and have different cultural values develop effective ways of communicating when there is little opportunity for the members to meet face-to-face. The authors also reveal how organizations can implement performance management and reward systems that will motivate team members to cooperate across multiple boundaries. And they offer the information to determine which technologies best fit a variety of virtual-team tasks and the level of information technology support needed.

**Big Data Analytics in Genomics**
Ka-Chun Wong 2016-10-24

This contributed volume explores the emerging intersection between big data analytics and genomics. Recent sequencing technologies have enabled high-throughput sequencing data generation for genomics resulting in several international projects which have led to massive genomic data accumulation at an unprecedented pace. To reveal novel genomic insights from this data within a reasonable time frame, traditional data analysis methods may not be sufficient or scalable, forcing the need for big data analytics to be developed for genomics. The
computational methods addressed in the book are intended to tackle crucial biological questions using big data, and are appropriate for either newcomers or veterans in the field. This volume offers thirteen peer-reviewed contributions, written by international leading experts from different regions, representing Argentina, Brazil, China, France, Germany, Hong Kong, India, Japan, Spain, and the USA. In particular, the book surveys three main areas: statistical analytics, computational analytics, and cancer genome analytics. Sample topics covered include: statistical methods for integrative analysis of genomic data, computation methods for protein function prediction, and perspectives on machine learning techniques in big data mining of cancer. Self-contained and suitable for graduate students, this book is also designed for bioinformaticians, computational biologists, and researchers in communities ranging from genomics, big data, molecular genetics, data mining, biostatistics, biomedical science, cancer research, medical research, and biology to machine learning and computer science. Readers will find this volume to be an essential read for appreciating the role of big data in genomics, making this an invaluable resource for stimulating further research on the topic.

E-Learning Practice in Higher Education: A Mixed-Method Comparative Analysis - Sayed Hadi Sadeghi 2017-09-13 This book investigates e-learning practices at American and Australian institutes of higher learning, their status quo, best-practice examples, and remaining issues. Utilizing a mixed-methods approach, it combines three studies - two using quantitative methods and a third using qualitative methods - in order to gauge the status quo of e-learning. The first study addresses the dominant cultural dimensions, revealing that the main explanation for the results may be the fact that most suppliers of the Australian university’s e-learning system had an East Asian cultural
background and predominantly traditional perspectives on learning. In Study 2, the findings indicate that the levels of e-learning practice at the Australian and US universities surveyed were above average, although the American university was ranked higher in terms of e-learning practices. In turn, Study 3 investigates current problems in e-learning practice on the basis of four aspects – pedagogy, culture, technology and e-practice – and determines that cultural sensitivity and effective cultural practices show room for improvement, while key technological challenges and issues like faculty polices, quality, LMS, and online support need to be overcome. In general, the outcomes suggest that it is essential for the Australian university surveyed to further develop and update its e-learning system, especially in terms of e-practice, using the same technologies that pioneering countries like America are employing. Indeed, the combination of adopting patterns successfully used in other countries, and adjusting them to the Australian culture, represents the best strategy for educational decision and policy makers. This book provides the basis for designing a culture-sensitive framework for higher education e-learning practice in American and Australian contexts. Moreover, students’ and teachers’ experiences with e-learning in a comparative higher education context can help higher education instructors and university managers to understand how e-learning relates to, and can be integrated with, other experiences of learning and teaching.

COVID-19 and Education
Christopher Cheong
2021-05-28 Topics include work-integrated learning (internships), student well-being, and students with disabilities. Also, it explores the impact on assessments and academic integrity and what analysis of online systems tells us. Preface

.................................................................................. ix Section I: Introduction

..................................................................................
Perspective of Higher Education Students ........................................ 189
Kesavan Vadakalur Elumalai, Jayendira P Sankar, Kalaichelvi R, Jeena Ann John, Nidhi Menon, Mufleh Salem M Alqahtani, May Abdulaziz Abumelha Disabilities
................................................................. 213 Chapter 10: Learning and Working Online During the COVID-19 Pandemic: A Wellbeing Literacy Perspective on Work Integrated Learning Students
............. 215 Nancy An, Gillian Vesty, Christopher Cheong
Chapter 11: Hands-on Learning in a Hands-off World: Project-Based Learning as a Method of Student Engagement and Support During the COVID-19 Crisis .. 245 Nicole A. Suarez, Ephemeral Rosshdy, Dana V. Bakke, Andrea A. Chiba, Leanne Chukoskie
Chapter 12: Positive and Contemplative Pedagogies: A Holistic Educational Approach to Student Learning and Well-being
.................................................................

Statistics for Politics and International Relations
Using IBM SPSS Statistics
Helen M. Williams 2020-02-03
Guiding you from first principles to advanced techniques, this book uses IBM SPSS Statistics examples specific to your Politics and International Relations studies to equip you with the tools to understand key concepts in quantitative research, and use them to produce and interpret data. The book takes you through the entire research process,
from choosing a research question through to writing up your findings. Key features include: Software-specific sections in each chapter to show you how to use SPSS, while mathematical equations are kept to a minimum. Packed with real life examples. Extensive learning features including: chapter objectives, boxed summaries, illustrations, exercises and end-of-chapter questions, suggestions of further reading and a glossary. Accompanied by a collection of online resources including datasets, exercises, multiple choice questions, podcasts, videos and further reading and weblinks. This is an invaluable research companion for students of Politics and International Relations using IBM SPSS Statistics.

**Trends and Issues in Distance Education** - Yusra Laila Visser 2005-11-01
This book provides a broad treatment of current distance education trends and issues from an international vantage point. The book includes some twenty authored chapters that provide insight into specific implementations of distance education worldwide, as well as analyses of cross-national distance education themes. The book is designed to address the needs of a broad audience including practitioners, researchers, and graduate students, all of whom are impacted by the growing trend toward distance education in high school and university-levels.

**Multicultural Awareness and Technology in Higher Education: Global Perspectives** - Issa, Tomayess
2014-03-31
Diversity among university students plays a significant role in raising awareness of numerous issues surrounding cultural heritage, language differences, cross-cultural collaboration, and international education. The integration of technological tools can assist students in cooperating nationally and internationally both in their current educational and future professional settings. Multicultural Awareness and Technology in Higher Education: Global Perspectives encompasses the
latest research on the impact and integration of technology into international education and culturally diverse learning environments. Providing the latest teaching and learning methods, technologies, and approaches at the university level, this publication is a useful reference for academics, educational administrators in public and private institutions, and information society researchers.

With the technological advancement of mobile devices, social networking, and electronic services, Web technologies continues to play an ever-growing part of the global way of life, incorporated into cultural, economical, and organizational levels. Web Technologies: Concepts, Methodologies, Tools, and Applications (4 Volume) provides a comprehensive depiction of current and future trends in support of the evolution of Web information systems, Web applications, and the Internet. Through coverage of the latest models, concepts, and architectures, this multiple-volume reference supplies audiences with an authoritative source of information and direction for the further development of the Internet and Web-based phenomena.

The remediation of environmental pollutants has become a relevant topic within the field of waste management. Advances in biological approaches are a potential tool for contamination and pollution control. The Handbook of Research on Microbial Tools for Environmental Waste Management is a critical scholarly resource that explores the advanced biological approaches that are used as remediation for pollution cleanup processes. Featuring coverage on a
broad range of topics such as biodegradation, microbial dehalogenation, and pollution controlling treatments, this book is geared towards environmental scientists, biologists, policy makers, graduate students, and scholars seeking current research on environmental engineering and green technologies.

Developments in technologies have evolved in a much wider use of technology throughout science, government, and business; resulting in the expansion of geographic information systems. GIS is the academic study and practice of presenting geographical data through a system designed to capture, store, analyze, and manage geographic information. Geographic Information Systems: Concepts, Methodologies, Tools, and Applications is a collection of knowledge on the latest advancements and research of geographic information systems. This book aims to be useful for academics and practitioners involved in geographical data.

Deep Learning-Based Approaches for Sentiment Analysis - Basant Agarwal 2020-01-24

This book covers deep-learning-based approaches for sentiment analysis, a relatively new, but fast-growing research area, which has significantly changed in the past few years. The book presents a collection of state-of-the-art approaches, focusing on the best-performing, cutting-edge solutions for the most common and difficult challenges faced in sentiment analysis research. Providing detailed explanations of the methodologies, the book is a valuable resource for researchers as well as newcomers to the field.

Using Technology Tools to Innovate Assessment, Reporting, and Teaching
Many can now conclude that utilizing educational technologies can be considered the primary tools to inspire students to learn. Combining these technologies with the best teaching and learning practices can engage in creativity and imagination in the engineering field. Using Technology Tools to Innovate Assessment, Reporting, and Teaching Practices in Engineering Education highlights the lack of understanding of teaching and learning with technology in higher education engineering programs while emphasizing the important use of this technology. This book aims to be essential for professors, graduate, and undergraduate students in the engineering programs interested learning the appropriate use of technological tools.

Customer-Centric Marketing Strategies: Tools for Building Organizational Performance

As customer orientation continues to gain importance in the marketing field, there has been a growing concern for organizations to implement effective customer-centric policies. Customer-Centric Marketing Strategies: Tools for Building Organizational Performance provides a more conceptual understanding on customer-centric marketing strategies as well as revealing the success factors of these concepts. This book will discuss how to improve the organization's financial and marketing performance.

Information Communication Technologies: Concepts, Methodologies, Tools, and Applications

The rapid development of information communication technologies (ICTs) is having a profound impact across numerous aspects of social, economic, and cultural activity worldwide, and keeping pace with the associated effects,
implications, opportunities, and pitfalls has been challenging to researchers in diverse realms ranging from education to competitive intelligence.

The Handbook of Technology and Second Language Teaching and Learning - Carol A. Chapelle
2019-12-12 The Handbook of Technology and Second Language Teaching and Learning presents a comprehensive exploration of the impact of technology on the field of second language learning. The rapidly evolving language-technology interface has propelled dramatic changes in, and increased opportunities for, second language teaching and learning. Its influence has been felt no less keenly in the approaches and methods of assessing learners' language and researching language teaching and learning. Contributions from a team of international scholars make up the Handbook consisting of four parts: language teaching and learning through technology; the technology-pedagogy interface; technology for L2 assessment; and research and development of technology for language learning. It considers how technology assists in all areas of language development, the emergence of pedagogy at the intersection of language and technology, technology in language assessment, and major research issues in research and development of technologies for language learning. It covers all aspects of language including grammar, vocabulary, reading, writing, listening, speaking, pragmatics, and intercultural learning, as well as new pedagogical and assessment approaches, and new ways of conceiving and conducting research and development. The Handbook of Technology and Second Language Teaching and Learning demonstrates the extensive, multifaceted implications of technology for language teachers, learners, materials-developers, and researchers.

Application Development and Design: Concepts,
Methodologies, Tools, and Applications—Management Association, Information Resources 2017-08-11
Advancements in technology have allowed for the creation of new tools and innovations that can improve different aspects of life. These applications can be utilized across different technological platforms. Application Development and Design: Concepts, Methodologies, Tools, and Applications is a comprehensive reference source for the latest scholarly material on trends, techniques, and uses of various technology applications and examines the benefits and challenges of these computational developments. Highlighting a range of pertinent topics such as software design, mobile applications, and web applications, this multi-volume book is ideally designed for researchers, academics, engineers, professionals, students, and practitioners interested in emerging technology applications.

Brain Neurotrauma—Firas H. Kobeissy 2015-02-25 Every year, an estimated 1.7 million Americans sustain brain injury. Long-term disabilities impact nearly half of moderate brain injury survivors and nearly 50,000 of these cases result in death. Brain Neurotrauma: Molecular, Neuropsychological, and Rehabilitation Aspects provides a comprehensive and up-to-date account on the latest developments in the area of neurotrauma, including brain injury pathophysiology, biomarker research, experimental models of CNS injury, diagnostic methods, and neurotherapeutic interventions as well as neurorehabilitation strategies in the field of neurotraum research. The book includes several sections on neurotrauma mechanisms, biomarker discovery, neurocognitive/neurobehavioral deficits, and neurorehabilitation and treatment approaches. It also contains a section devoted to models of mild CNS injury, including blast and sport-related injuries. Over the last
decade, the field of neurotrauma has witnessed significant advances, especially at the molecular, cellular, and behavioral levels. This progress is largely due to the introduction of novel techniques, as well as the development of new animal models of central nervous system (CNS) injury. This book, with its diverse coherent content, gives you insight into the diverse and heterogeneous aspects of CNS pathology and/or rehabilitation needs.

**Comparative study on blocking, filtering and take-down of illegal internet content** - Council of Europe 2017-03-28
Across the member states of the Council of Europe, both the blocking and removal of online material are frequently treated in a similar way. However, the existence or the lack of a legislative framework specifically targeted to the internet, and the specificities of national regulatory “models” translate in different practices and can be a challenge for the states concerned. The Council of Europe commissioned a comparative study from the Swiss Institute of Comparative Law in respect of filtering, blocking and take-down of illegal content on the internet in the 47 member states of the Organisation. This study describes and assesses the legal framework but also the relevant case-law and practice in the field. It comprises a comparative analysis – which is the subject of this publication – and country reports (available on the website: www.coe.int/freedomofexpression).

**Government Communications in a Digital Age** - Kim Murphy 2019-06-13
Genau wie politische Parteien müssen sich die Regierungen an die Anforderungen der digitalen Sphäre anpassen, da ihre Legitimität von ihrer Fähigkeit abhängt, Entscheidungen den Bürgern mitzuteilen. Trotz umfangreicher Untersuchungen darüber, wie das Internet die politische
online learning has become pervasive in many fields in higher education, it has been adopted somewhat slower in teacher education. In addition, more research is needed to empirically evaluate the effectiveness of online education in teacher preparation. Teacher Education Programs and Online Learning Tools: Innovations in Teacher Preparation presents information about current online practices and research in teacher education programs, and explores the opportunities, methods, and issues surrounding technologically innovative opportunities in teacher preparation. It presents empirical evidence of teacher candidate learning and assessment in the context of various online aspects of teacher licensure.

The Social Net - Yair Amichai-Hamburger 2013-02-07 In the past two decades, the Internet has come to dominate every aspect of everyday life. This has been a huge change for many of us, and, for the younger generation - born...
into this situation - there has been no other way of living. How does this new way of life affect our health and happiness, our well-being? How does it affect our relationships, our friendships? Has the definition of friendship changed now that we have hundreds of friends on Facebook? Why is it that some people find it so hard to talk to people in their daily lives but find it so easy on the Internet? People spend so much time on the Internet - so what do we actually do on there? Why are some people so aggressive and others exceptionally helpful? Are these behaviors that we see from the same people offline? How do we take decisions online and which groups would we rather belong to online where nobody knows us, rather than revealing our true identity to the outside world? The new edition of 'The Social Net' provides a comprehensive understanding of the social aspects of the Internet. It contains chapters on topics such as identity manipulation, online romantic relationships, online decision making, the internet and aggression, and online prejudice and discrimination. The book provides the reader with an understanding of both the negative and positive influences of the net and is an exceptionally useful guide for how to use the net to improve wellbeing. Today, when there is so much negative publicity surrounding the Internet - despite our reliance on it - this book provides a much needed balanced understanding of the Net and its influence.

Microbial Genomics in Sustainable Agroecosystems-Vijay Tripathi 2019-11-05 In recent decades, significant advances in new methodologies like DNA sequencing and high-throughput sequencing have been used to identify microorganisms and monitor their interactions with different environments. Microbial genomics techniques are opening new approaches to microbiology by revealing how microorganisms affect human beings and the environment. This book covers four major
areas: 1) Environmental microbial genomics, 2) Microbial genomics in human health, 3) Microbial genomics in crop improvement and plant health protection, and 4) Genome analysis of microbial pathogens. Within these areas, the topics addressed include: microbial genome diversity, evolution, and microbial genome sequencing; bioinformatics and microarray-based genomic technologies; functional genomics of bioremediation of soil and water from organic and inorganic pollutants and carbon management; functional genomics of microbial pathogens and relevant microorganisms; functional genomics of model microorganisms; and applied functional genomics. Given its scope, the book offers a comprehensive source of information on the latest applications of microorganisms and microbial genomics to enhance the sustainability of agriculture and the environment.

Nutrition in Public Health -
Sari Edelstein 2010-10-22
Health Sciences & Professions

Decision Making in a World of Comparative Effectiveness Research-
Howard G. Birnbaum
2017-05-05 In the past decade there has been a worldwide evolution in evidence-based medicine that focuses on real-world Comparative Effectiveness Research (CER) to compare the effects of one medical treatment versus another in real world settings. While most of this burgeoning literature has focused on research findings, data and methods, Howard Birnbaum and Paul Greenberg (both of Analysis Group) have edited a book that provides a practical guide to decision making using the results of analysis and interpretation of CER. Decision Making in a World of Comparative Effectiveness contains chapters by senior industry executives, key opinion leaders, accomplished researchers, and leading attorneys involved in resolving disputes in the life sciences industry. The book is aimed at 'users' and 'decision makers' involved in the life sciences industry rather than
those doing the actual research. This book appeals to those who commission CER within the life sciences industry (pharmaceutical, biologic, and device manufacturers), government (both public and private payers), as well as decision makers of all levels, both in the US and globally.

**Social Software and the Evolution of User Expertise: Future Trends in Knowledge Creation and Dissemination** - Tatjana 
Tatjana 2012-10-31 The new generation of internet technologies and web applications is seeing a growth in social software and networking, as well as other communications tools. This infrastructure of social interaction and collaboration has provided an increase in more dynamic user participation and expertise in knowledge of contents and facts traditionally only held by experts. Social Software and the Evolution of User Expertise: Future Trends in Knowledge Creation and Dissemination examines the vital role that social software applications play in regards to the cultural definitions of experts and challenges the reader to consider how recent changes in this area influence how we create and distribute knowledge. This collection brings together scholars and practitioners from various disciplines and professions to project a new kind of thinking about the understanding of the major changes in many professions.

**Managing Democracy in the Digital Age** - Julia Schwanholz 2017-09-13 In light of the increased utilization of information technologies, such as social media and the ‘Internet of Things,’ this book investigates how this digital transformation process creates new challenges and opportunities for political participation, political election campaigns and political regulation of the Internet. Within the context of Western democracies and China, the contributors analyze these challenges and opportunities from three perspectives: the regulatory
state, the political use of social media, and through the lens of the public sphere. The first part of the book discusses key challenges for Internet regulation, such as data protection and censorship, while the second addresses the use of social media in political communication and political elections. In turn, the third and last part highlights various opportunities offered by digital media for online civic engagement and protest in the public sphere. Drawing on different academic fields, including political science, communication science, and journalism studies, the contributors raise a number of innovative research questions and provide fascinating theoretical and empirical insights into the topic of digital transformation.

Recent Trends in Network Security and Applications
Natarajan Meghanathan
2010-07-07 The Third International Conference on Network Security and Applications (CNSA-2010) focused on all technical and practical aspects of security and its applications for wired and wireless networks. The goal of this conference is to bring together researchers and practitioners from academia and industry to focus on understanding modern security threats and countermeasures, and establishing new collaborations in these areas. Authors are invited to contribute to the conference by submitting articles that illustrate research results, projects, survey work and industrial experiences describing significant advances in the areas of security and its applications, including:

- Network and Wireless Network Security
- Mobile, Ad Hoc and Sensor Network Security
- Peer-to-Peer Network Security
- Database and System Security
- Intrusion Detection and Prevention
- Internet Security, and Applications
- Security and Network Management
- E-mail Security, Spam, Phishing, E-mail Fraud
- Virus, Worms, Trojan Protection
- Security Threats and Countermeasures (DDoS, MiM, Session Hijacking, Replay attack etc.)
- Ubiquitous Computing
Security • Web 2.0 • Security • Cryptographic Protocols • Performance Evaluations of Protocols and Security Application There were 182 submissions to the conference and the Program Committee selected 63 papers for publication. The book is organized as a collection of papers from the First International Workshop on Trust Management in P2P Systems (IWTMP2PS 2010), the First International Workshop on Database Management Systems (DMS-2010), and the First International Workshop on Mobile, Wireless and Networks Security (MWNS-2010).

Tools for Teaching Logic—Patrick Blackburn 2011-05-23
This book constitutes the proceedings of the Third International Congress on Tools for Teaching Logic, TICTTL 2011, held in Salamanca, Spain, in June 2011. The 30 papers presented were carefully reviewed and selected from 62 submissions. The congress focusses on a variety of topics including: logic teaching software, teaching formal methods, logic in the humanities, dissemination of logic courseware and logic textbooks, methods for teaching logic at different levels of instruction, presentation of postgraduate programs in logic, e-learning, logic games, teaching argumentation theory and informal logic, and pedagogy of logic.

Internet of Things—Applications and Future—Atef Zaki Ghalwash 2020-04-03
This book is a collection of the best research papers presented at the First World Conference on Internet of Things: Applications & Future (ITAF 2019), Sponsored by GR Foundation and French University in Egypt, held at Triumph Luxury Hotel, Cairo, Egypt, on 14–15 October 2019. It includes innovative works from leading researchers, innovators, business executives, and industry professionals that cover the latest advances in and applications for commercial and industrial end users.
across sectors within the emerging Internet of Things ecosphere. It addresses both current and emerging topics related to the Internet of Things such as big data research, new services and analytics, Internet of Things (IoT) fundamentals, electronic computation and analysis, big data for multi-discipline services, security, privacy and trust, IoT technologies, and open and cloud technologies.

**Handbook of EHealth Evaluation**-Francis Yin Yee Lau 2016-11 To order please visit https://onlineacademiccommunity.uvic.ca/press/books/ordering/

**Crowdsourcing: Concepts, Methodologies, Tools, and Applications**-Management Association, Information Resources 2019-05-03 With the growth of information technology, many new communication channels and platforms have emerged. This growth has advanced the work of crowdsourcing, allowing individuals and companies in various industries to coordinate efforts on different levels and in different areas. Providing new and unique sources of knowledge outside organizations enables innovation and shapes competitive advantage. Crowdsourcing: Concepts, Methodologies, Tools, and Applications is a collection of innovative research on the methods and applications of crowdsourcing in business operations and management, science, healthcare, education, and politics. Highlighting a range of topics such as crowd computing, macrotasking, and observational crowdsourcing, this multi-volume book is ideally designed for business executives, professionals, policymakers, academicians, and researchers interested in all aspects of crowdsourcing.

**Neural Information Processing**-Sabri Arik 2015-12-08 The four volume set LNCS 9489, LNCS 9490, LNCS 9491, and LNCS 9492 constitutes the proceedings of the 22nd International Conference on Neural
Information Processing, ICONIP 2015, held in Istanbul, Turkey, in November 2015. The 231 full papers presented were carefully reviewed and selected from 375 submissions. The 4 volumes represent topical sections containing articles on Learning Algorithms and Classification Systems; Artificial Intelligence and Neural Networks: Theory, Design, and Applications; Image and Signal Processing; and Intelligent Social Networks.

Cyber Behavior: Concepts, Methodologies, Tools, and Applications - Management Association, Information Resources 2014-04-30 Following the migration of workflows, data, and communication to the Cloud and other Internet-based frameworks, interaction over the Web has become ever more commonplace. As with any social situation, there are rules and consequences to actions within a virtual environment. Cyber Behavior: Concepts, Methodologies, Tools, and Applications

explores the role of cyberspace in modern communication and interaction, including considerations of ethics, crime, security, and education. With chapters on a variety of topics and concerns inherent to a contemporary networked society, this multi-volume work will be of particular interest to students and academicians, as well as software developers, computer scientists, and specialists in the field of Information Technologies.

Software Applications: Concepts, Methodologies, Tools, and Applications - Tiako, Pierre F. 2009-03-31 Includes articles in topic areas such as autonomic computing, operating system architectures, and open source software technologies and applications.

Human Development and Interaction in the Age of Ubiquitous Technology - Rahman, Hakikur 2016-06-27 The human condition is affected by numerous factors
in modern society. In modern times, technology is so integrated into culture that it has become necessary to perform even daily functions. Human Development and Interaction in the Age of Ubiquitous Technology is an authoritative reference source for the latest scholarly research on the widespread integration of technological innovations around the globe and examines how human-computer interaction affects various aspects of people’s lives. Featuring emergent research from theoretical perspectives and case studies, this book is ideally designed for professionals, students, practitioners, and academicians.

**Internet Accessible Remote Laboratories: Scalable E-Learning Tools for Engineering and Science Disciplines** - Azad, Abul K.M. 2011-11-30 "This book presents current developments in the multidisciplinary creation of Internet accessible remote laboratories, offering perspectives on teaching with online laboratories, pedagogical design, system architectures for remote laboratories, future trends, and policy issues in the use of remote laboratories"-- Provided by publisher.

**Comparative Analysis Of Nations** - Robert Perry 2019-04-30 The comparative method is fundamental and critical for political scientists, and especially those interested in comparative politics. Such questions as how democratic is the United States, how rich is Germany, and how ethnically complex is Nigeria-and what effects these attributes have on important political phenomena—cannot be analyzed except comparatively. To understand politics we need to think in terms of concepts, processes, behavior and authority patterns that transcend specific regions or nation-states. Comparative Analysis of Nations is designed to address three questions confronting the study of politics: (1) What do I do once I have identified a question that I want to explore within a
cross-national perspective? (2) How do I proceed so I adequately address this question? (3) Why should I proceed with this particular study plan? Perry and Robertson examine how to conceptualize, operationalize, measure, sample, analyze, and evaluate these research questions. In clear language they stress the logic behind basic techniques of quantitative analysis, issues of measurement and hypothesis testing, basic techniques of hypothesis testing (tabular analysis, ANOVA, scatterplots, bivariate regression) and advanced bivariate analysis (curvilinear and multiple regression). The book requires no previous training in statistics or math. Cross-national data sets accompany the book on a CD-ROM and are compatible with the popular SPSS package. The data sets enable the instructor the opportunity to engage the students directly in devising their own modified models of analysis to complement and extend the demonstrations within the text. In sum, the text integrates the core tools and strategies of social science analysis within a framework that highlights the quantitative study of comparative politics.
