Common Sense, Science and Scepticism: A Historical Introduction to the Theory of Knowledge

Common Sense in the Scottish Enlightenment: Charles Reid Telford 2014 Common sense philosophy was one of the Scottish Enlightenment's most original intellectual endeavors. This major work reprints many of the key texts of the movement, some never before collected and others never reprinted in modern times. This volume offers a clear and engaging introduction to the Scottish Enlightenment's most famous philosopher, who was also one of its most important critics, T. H. Huxley. Huxley's 1895 book is a key text in the history of philosophy, offering the first serious analysis of the Scottish Enlightenment. In these pages, Huxley illuminates the philosophical foundations of common sense, science, and scepticism, showing how one can begin to understand the Enlightenment's legacy in Europe, America and beyond. The result is a comprehensive and accessible volume that illuminates the richness, the intellectual variety and the underlying common-sense basis of the Scottish Enlightenment.

Philosophers interviewed are drawn from a variety of backgrounds and perspectives, and in these pages they speak frankly and accessibly about their philosophical researches in the world of science, reflecting the ways in which science and philosophy have interacted in the past and might develop in the future. Discussing a wide range of current scientific fields and issues, including the philosophy of science, the philosophy of mind, and the philosophy of language, they provide unique insights into the history and development of philosophy in the Antipodes, its current flourishing and its future prospects.
